

HOME APP

DEVELOPER TECHNICAL SPECIFICATION

Document Version:	v1.0
Ecosystem Target:	Housing, Marketplace & Services
Date:	July 2026
Author:	Product Architecture Team

1. EXECUTIVE SUMMARY & DESIGN VISION

The **Home App** is a premium, multi-sided ecosystem designed to streamline the residential lifecycles of leasing, moving, and furnishing a property. The platform serves five distinct user roles: **Clients** (Tenants/Buyers), **House Hunters** (Geographical Scouts), **Landlords** (Property Owners), **Retailers** (Furniture/Amenity Merchants), and **Movers** (Logistics Partners).

The visual language shifts away from cold, flat tech interfaces to embrace an organic, high-end lifestyle aesthetic. Implement the design utilizing the following brand guidelines:

- **Primary Background:** Soft Cream (#F7F4F0) — warm, clean, and spacious.
- **Primary Typography & Bold Elements:** Deep Cocoa (#3D2314) — rich and premium.
- **Active Highlights & Status Indicators:** Matte Clay (#A67C52) — earthy brand color.
- **Borders & Neutral Styling Elements:** Warm Almond (#D9C5B2) — soft, clean dividers.

2. APP NAVIGATION & LAYOUT STRUCTURE

The front-end client shell features a highly responsive, card-based interface inspired by classic visual discovery portals, utilizing exact components below:

A. Top Search & Header Bar

- **Search Bar:** A pill-shaped search input centered at the top of the viewport, styled with a thin #D9C5B2 border and a search icon.
- **Horizontal Tabs:** Positioned directly underneath the search bar. Transition line indicators are styled in **Deep Cocoa** (#3D2314).
 - **Homes:** Rental database with visual cards.
 - **Marketplace:** E-Commerce catalog containing furniture bundles and household items.
 - **Services:** Hub to book home-specific amenities (cleaning, moving, setups).

B. Bottom Dock Navigation Bar

A persistent bottom navigation layout composed of exactly 4 tabs to maintain clear focus on transactions:

- **Explore:** Active state colored in **Matte Clay** (#A67C52). Maps directly to primary search feeds.
- **Wishlist:** Highlighting favorited properties, furniture bundles, or booked professional services.
- **Messages:** Dedicated secure message interface supporting client-to-hunter, client-to-retailer, and client-to-mover messaging.
- **Profile:** Handling KYC document storage, transaction ledger tracking, and active lease statuses.

Implementation Note: The standard travel-specific "Trips" tab must be completely omitted from the bottom navigation bar to support localized domestic and moving operations.

3. USER PROCESS LIFECYCLES

Developers must implement state-machine workflows for each role as defined in these five key steps:

A. The Client (Tenant/Buyer) Journey

1. **Sign-Up & Profiling:** Authenticates via phone/OAuth and defines budget/neighborhood filters.
2. **Matchmaking:** Explores verified homes and opens an in-app chat direct with the assigning House Hunter.
3. **Escrow Booking:** Submits first month's rent + deposit. Funds are securely locked in the Platform Escrow account.
4. **Customization Upsell:** Optional add-ons are prompted during checkout (e.g., buying a furniture package or booking a mover).
5. **Confirm Move-In:** On-site, client taps "Confirm Move-In," releasing escrow to the Landlord, Hunter, and other parties.

B. The House Hunter (On-Ground Scout) Journey

1. **Onboarding:** Completes identity verification (KYC check via Government ID upload).
2. **Sourcing:** Finds off-market vacant apartments, uploads geotagged images, and adds properties to the app.
3. **Lead Engagement:** Manages viewings and coordinates secure client communication in-app.
4. **Coordination:** Assists movers and unlocks properties on scheduled move-in days.
5. **Payout Release:** Instantly receives the finder's bounty upon Client confirmation of move-in.

C. The Landlord (Owner) Journey

1. **Listing Creation:** Registers properties and sets rental parameters.
2. **Hunter Assignment:** Matches with local House Hunters to physically verify the listings.
3. **Tenant Approval:** Reviews vetted client profiles and signs off on digital leasing in-app.
4. **Automated Disbursements:** Receives clean monthly payouts after the standard escrow holding time.

D. The Retailer & Mover Journeys

- **Retailers:** Onboard inventory, receive location-specific purchase notifications linked with move-in dates, coordinate drop-off with the House Hunter, and receive payment upon client sign-off.
- **Movers:** Accept local hauling gigs, follow GPS coordination paths directly to the client's new address, verify cargo arrival, and receive automated service fee pay.

4. TECHNICAL DATABASE SCHEMA

The backend engine must be built using a relational architecture (e.g., PostgreSQL) to link core entities securely. Maintain references exactly as declared below:

Entity-Relationship Mapping

A. Users Table

Column Name	Data Type	Key/Constraints	Description
user_id	UUID	Primary Key	Unique user identifier.
full_name	VARCHAR(100)	NOT NULL	Full legal name.
phone_number	VARCHAR(20)	NOT NULL, UNIQUE	Verified telephone for payment links.
role	ENUM	NOT NULL	'Client', 'Hunter', 'Landlord', 'Retailer', 'Mover'.
verification_status	BOOLEAN	DEFAULT FALSE	Mandatory true state for Hunters/Landlords.
created_at	TIMESTAMP	DEFAULT CURRENT_TIMESTAMP	Audit trailing creation date.

B. Properties Table

Column Name	Data Type	Key/Constraints	Description
property_id	UUID	Primary Key	Unique property reference.
landlord_id	UUID	Foreign Key (Users)	References the landlord user entity.
hunter_id	UUID	Foreign Key (Users)	References the verifying scout.
title	VARCHAR(150)	NOT NULL	Title description.
rent_amount	DECIMAL(12,2)	NOT NULL	Base rent value.
status	ENUM	DEFAULT 'Available'	'Available', 'Pending_Escrow', 'Rented'.

C. Bookings Table (The Core Transactional Cart)

This table acts as the unified cart matching all transactional additions (Property + Products + Services) to a single user booking workflow.

Column Name	Data Type	Key/Constraints	Description
booking_id	UUID	Primary Key	Unified order basket checkout reference.
client_id	UUID	Foreign Key (Users)	Matches client checking out.
property_id	UUID	Foreign Key (Properties)	Target housing unit (nullable).
product_id	UUID	Foreign Key (Products)	Target marketplace item (nullable).
service_id	UUID	Foreign Key (Services)	Target booking service (nullable).
move_in_date	DATE	NOT NULL	Agreed date of occupancy.

D. Transactions Table (The Escrow Engine)

Column Name	Data Type	Key/Constraints	Description
transaction_id	UUID	Primary Key	Payment reference tracking.
booking_id	UUID	Foreign Key (Bookings)	Associates direct to the checkout cart.
amount_paid	DECIMAL(12,2)	NOT NULL	Total invoice amount.
escrow_status	ENUM	DEFAULT 'Held_In_Escrow'	'Held_In_Escrow', 'Released', 'Refunded'.
release_date	TIMESTAMP	NOT NULL	Scheduled date of payout release.

Backend Business Logic: Payout triggers must automatically set release_date to exactly move_in_date + 48 hours. Unless a formal dispute flag is raised by the Client, the database scheduling workers must disburse the escrow funds instantly upon hitting this timestamp.
